

## How is the Cover held on my Caravan?

Good question and one that you need to be aware of when selecting your new cover.

The Kampa covers have an elastic hem that fits nicely round the bottom of your caravan. There are then a selection of good quality adjustable straps and buckles that allow you to tighten the cover and reduce movement in the cover.

Again, be careful as there are many covers on the market without these features and allow the wind to get underneath the cover and cause movement over the caravan which can cause damage to the paintwork and windows.
